Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

# Consistency proof of an arithmetic with substitution inside a bounded arithmetic

Yoriyuki Yamagata

Kyoto University

October 6, 2016

## Definition (Language $L$ )

- 1 *Constant:*  $0$
- 2 *Function symbols:*  $S, +, \times, \lfloor \frac{\cdot}{2} \rfloor, |\cdot|, \#$
- 3 *Relation symbols:*  $=, \leq$

## Remark

- 1  $\lfloor \frac{a}{2} \rfloor$  is the division by two
- 2  $|a|$  is the length of bits of  $a$
- 3  $a\#b = 2^{|a|\cdot|b|}$

# Bounded arithmetic

## Definition (Bounded arithmetic over $L$ )

A theory of arithmetic of which axioms consist in

- ① *BASIC* axioms
- ② induction schema only for *bounded* formulas

## Remark

*All quantifiers of a bounded formula must be bounded by terms of  $L$ .*

# Hierarchy of bounded formulas

$$\begin{aligned} \forall x \leq |t|, \exists x \leq |t| : & \quad \textit{sharply} \text{ bounded quantifiers} \\ \forall x \leq t, \exists x \leq t : & \quad \textit{bounded} \text{ quantifiers} \end{aligned}$$

The hierarchy of bounded formulas

$$\Pi_0^b \subset \Pi_1^b \subset \cdots \subset \Pi_i^b \subset \cdots$$

$$\Sigma_0^b \subset \Sigma_1^b \subset \cdots \subset \Sigma_i^b \subset \cdots$$

defined by alternation of bounded quantifiers  
ignoring *sharply* bounded quantifiers.

# Many induction schemata

Consistency proof  
inside a bounded  
arithmetic

Yoriyuki  
Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

For any term  $t$  and  $A \in \Sigma_i^b$

- 1  $\Sigma_i^b - IND: A(0) \supset \forall x(A(x) \supset A(Sx)) \supset A(t)$
- 2  $\Sigma_i^b - PIND: A(0) \supset \forall x(A(\lfloor \frac{x}{2} \rfloor) \supset A(x)) \supset A(t)$
- 3  $\Sigma_i^b - LIND: A(0) \supset \forall x(A(|x|) \supset A(S|x|)) \supset A(|t|)$

etc...

## Remark

- 1  $\Sigma_{i+1}^b - PIND \Rightarrow \Sigma_i^b - IND \Rightarrow \Sigma_i^b - PIND$
- 2  $\Sigma_i^b - PIND \Leftrightarrow \Sigma_i^b - LIND$

# Buss's bounded arithmetics

## Definition

- ①  $S_2^i$ : BASIC-axioms +  $\Sigma_i^b$  – PIND
- ②  $T_2^i$ : BASIC-axioms +  $\Sigma_i^b$  – IND
- ③  $S_2 = \bigcup_{i \in \mathbb{N}} S_2^i = \bigcup_{i \in \mathbb{N}} T_2^i$

## Remark

$$S_2^1 \subseteq T_2^1 \subseteq \cdots \subseteq S_2^i \subseteq T_2^i \subseteq \cdots$$

# $S_2^i$ and Polynomial Hierarchy (PH)

Consistency proof  
inside a bounded  
arithmetic

Yoriyuki  
Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

$T$ : a theory of arithmetic  $\Rightarrow$

$\text{PT}(T)$ : the set of provably total functions in  $T$

Fact (Buss 1988)

- 1  $\text{PT}(S_2^1) = \{PTIME \text{ functions}\}$
- 2  $\text{PT}(S_2^i) = \{PTIME \text{ functions using a } \Sigma_{i-1}^P \text{ oracle}\}$

## Definition ( $L^{PV}$ )

- 1 Constant: 0
- 2 Function symbols:  
 $s_0, s_1, S, +, -, \times, \text{Cond}, \lfloor \cdot \rfloor, | \cdot |, \boxplus, \#$  plus all  
PTIME-functions
- 3 Predicate: =

# Axioms

- 1  $s_0 0 = 0$
- 2 Defining axioms for primitive function symbols
- 3 Limited recursion on notations:

$$f(0, \bar{x}) = g(\bar{x})$$

$$f(s_0 x, \bar{x}) = \min\{g_0(x, f(x, \bar{x}), \bar{x}), k(s_0 x, \bar{x})\}$$

$$f(s_1 x, \bar{x}) = \min\{g_1(x, f(x, \bar{x}), \bar{x}), k(s_1 x, \bar{x})\}$$

- 4 Equational axioms
- 5 Substitution axiom  $t(x) = u(x) \Rightarrow t(s) = u(s)$
- 6 Induction axiom

Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

Fact (Buss, 1988)

*Incompleteness theorems hold in  $S_2^i$ , that is,*  
 $S_2^i \not\vdash \text{Con}(S_2^i)$

Question

$S_2 \vdash \text{Con}(S_2^1)$ ?

Answer (Wilkie and Paris, 1980)

$S_2 \not\vdash \text{Con}(Q)$

## More unprovability results

### Fact

- 1  $S_2^i \not\vdash \text{BdCon}(S_2^i)$  (Buss, 1988)
- 2  $S_2 \not\vdash \text{BdCon}(S_2^1)$  (Púdlak, 1990)
- 3  $S_2 \not\vdash \text{BdCon}(S_2^{-1})$  (Takeuti, 1990, Buss and Ignjatović, 1996)
- 4  $S_2^1 \not\vdash \text{Con}(\text{PV}_p^- + \text{BASIC})$  (Buss and Ignjatović, 1996)

etc...

Conjecture (Takeuti, 1991)

$$S_2^1 \not\vdash \text{Con}(S_2^{-\infty})$$

Answer (Beckmann, 2002)

Yes!

# Provability results

arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

## Theorem (Beckmann, 2002)

$$S_2^1 \vdash \text{Con}(PV^{--})$$

## Remark

- 1 *Actually, any rewriting system with good properties is okay*
- 2 *Not many provability results on consistency are known (except 2nd order propositional logic)*

Consistency proof  
inside a bounded  
arithmetic

Yoriyuki  
Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Theorem (Yamagata, 2016 (preprint))

$S_2^2 \vdash \text{Con}(PV^-)$

Remark

*To prove inside  $S_2^1$  could be possible, but it requires explicit construction of witness during induction on  $\Pi_2^b$ -formulas*

# BHK reading of equality

Consistency proof  
inside a bounded  
arithmetic

Yoriyuki  
Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

Read

$$t \stackrel{\cdot}{=}^{\cdot} u$$

as a “construction” from “computation” of  $t$  to  $u$  and vice versa, which preserves the value of a computation

# Proof strategy

Consistency proof  
inside a bounded  
arithmetic

Yoriyuki  
Yamagata

Buss's bounded  
arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

- ① “computation” = derivation in big-step semantics
- ② Bounds a number of *steps* of computations of  $u$  by that of  $t$  and vice versa
- ③ Bounds the *size* of a computation by its steps

# Judgment

arithmetic

Cook and  
Urquhart's PV

Separation of  
Buss's hierarchy

Main result:  
 $S_2^2 \vdash \text{Con}(PV^-)$

Proof

Conclusion

$$\langle t, \rho \rangle \downarrow v$$

- 1  $t$  : a term of PV
- 2  $\rho$  : a sequence of substitutions
- 3  $v$  : the *approximated* value using \*

# Big-step semantics

$$\begin{array}{c}
 \frac{\langle t, \rho_2 \rangle \downarrow v}{\langle x, \rho_1[t/x]\rho_2 \rangle \downarrow v} \text{ Subst} \qquad \frac{}{\langle t, \rho \rangle \downarrow * } * \\
 \\
 \frac{\langle \epsilon, () \rangle \downarrow \epsilon \quad \langle \epsilon, \rho \rangle \downarrow \epsilon}{\langle \epsilon, \rho \rangle \downarrow \epsilon} \epsilon \qquad \frac{}{\langle \epsilon, () \rangle \downarrow \epsilon} \epsilon^n \\
 \\
 \frac{\langle s_i v^*, () \rangle \downarrow s_i v^* \quad \langle t, \rho \rangle \downarrow v}{\langle s_i t, \rho \rangle \downarrow s_i v^*} s_i \qquad \frac{\langle v, () \rangle \downarrow v}{\langle s_i v, () \rangle \downarrow s_i v} s_i n \\
 \\
 \frac{\langle \epsilon, () \rangle \downarrow \epsilon \quad (\langle t_i, \rho \rangle \downarrow v_i)_{i \in X}}{\langle \epsilon^m(t_1, \dots, t_m), \rho \rangle \downarrow \epsilon} \epsilon^m \qquad \frac{\langle v_i^*, () \rangle \downarrow v_i^* \quad (\langle t_j, \rho \rangle \downarrow v_j)_{j \in X}}{\langle \text{proj}_m^i(t_1, \dots, t_m), \rho \rangle \downarrow v_i^*} \text{proj}_m^i
 \end{array}$$

$$\frac{\langle g(\overline{w^*}), () \rangle \downarrow z \quad \langle h^1(\overline{v^1}), () \rangle \downarrow w_1 \cdots \langle h^m(\overline{v^m}), () \rangle \downarrow w_m \quad (\langle t_i, \rho \rangle \downarrow v_i)_{i \in X}}{\langle f(t_1, \dots, t_n), \rho \rangle \downarrow z} \text{ comp}$$

$$\frac{\langle g_\epsilon(\overline{v^1}), () \rangle \downarrow z \quad \{ \langle t, \rho \rangle \downarrow \epsilon \} \quad (\langle t_i, \rho \rangle \downarrow v_i)_{i \in X}}{\langle f(t, t_1, \dots, t_n), \rho \rangle \downarrow z} \text{ rec-}\epsilon$$

$$\frac{\langle g_i(v_0^1, w^1, \overline{v^1}), () \rangle \downarrow z \quad \{ \langle t, \rho \rangle \downarrow s_i v_0 \} \quad \langle f(v_0^2, \overline{v^2}), () \rangle \downarrow w \quad (\langle t_j, \rho \rangle \downarrow v_j)_{j \in X}}{\langle f(t, t_1, \dots, t_n), \rho \rangle \downarrow z} \text{ rec-}s_i$$

# Computation

## Definition

*Computation* is a DAG of which nodes are judgments and edges are inferences of big-step semantics

- 1 Judgments which are not used as premises, are called *conclusions*
- 2  $\sigma \vdash \langle t_1, \rho_1 \rangle \downarrow v_1, \dots$   
computation  $\sigma$ , conclusions  $\langle t_1, \rho_1 \rangle \downarrow v_1, \dots$

## Notation

- 1  $||t||$ : Number of primitive symbols in any object  $t$
- 2  $||\sigma||$ : Number of nodes in  $\sigma$

# Main proposition

## Proposition

*Fix a large  $U$ . For any tree-like  $PV^-$ -proof  $\pi$*

$$\begin{array}{c} \vdots \pi \\ t = u \end{array}$$

*and  $\|\rho\|, \|\alpha\|, \|\sigma\| \leq U - \|\pi\|$  s.t.  $\sigma \vdash \langle t, \rho \rangle \downarrow v, \alpha$   
 $\Rightarrow \exists \tau$  s.t.*

①  $\|\tau\| \leq \|\sigma\| + \|\pi\|$

②  $\tau \vdash \langle u, \rho \rangle \downarrow v, \alpha$
